Forests, climate change mitigation and adaptation: Higher Education Cooperation in Mekong region

618803-EPP-1-2020-1-FI-EPPKA2-CBHE-JP

Erasmus+ Key Action 2:
Capacity Building in the field of Higher Education

Co-funded by
the European Union

Key outputs

Representatives from partner countries were trained in creating MOOCs and other innovative training methods, trained in teaching wood technology courses and in using virtual reality in teaching.

The 38 courses within MSc study programmes were developed or updated at all universities from partner countries.

Machine simulators, VR gear, drone gear, and wood technology equipment was purchased by universities from partner countries.

Study programmes were updated or upgraded so that graduate skills match the needs of forest-based industries.

A lively exchange was achieved both between the programme countries from the global North and with partner countries from the global South.

Within the project period, several project proposals were submitted, complimentary to the FRAME project, and partnerships were formed that extend beyond the original scope of the project.
